## **Abstract**

*In the field of green economy which forces each and every persons, each and every country to strive in the world of competition which forces them to not to hamper the environment but also to satisfy the needs of their owns, Poverty, no hunger, good health and well being, quality education, gender equality Clean energy, decent work and economic growth industry innovation, and infrastructure, reduce the inequality, sustainable city and communities, responsibilities consumption and production, Climate action, life below water, life on land peace justice and strong industry partnership for the goal. COP 21-Conference of Party it is binding agreement USA frame work for convention on climate change. SDG-Sustainable Development Goal it's a non binding agreement defined by United Nations.*

**Key Words:** *Sustainable Development Goal, COP21, Environment, Energy.*

## **1. Introduction**

Green economy defined as an economy which aims at reducing environmental risk scarcity accruing in entire ecology which further aims for UN's SDG without degrading the environmental which we are. The UN SDG's is a successor for MDG (millinem Development Goals) which expire in last year .SDG has a time scale till 2030 which is an binding target for the members of united Nations it helps even though it is not binding but the countries will peruse not only for the sake of achieving it but also for the welfare it is own people, the environment of that country and also the world as whole. The united nations frame work convention on climate change which has its previous meeting COP21 at Paris has outcome of one of the most important agreement

for all member of UN in this century, which is in the form Common But Differential Responsibilities and also targeted to keep global warming to well below 2c. These two remarkable agreement opens up a new tandem in the field of green economy which forces each and every persons, each and every country to strive for innovation in the world of competition which forces them to not to hamper the environment but also to satisfy the needs of their owns. "The world has enough space for need but not for greed". The wording of Mahatma is true even after 100 years each innovation to bring out the things which not only helps for their need and also some of their greed. Some of the things which we are going analysis how the country took their step to satisfy both the SDG and COP21 agreement in field of green economy.

## **2. AICHI 2005 – Japan**

The first Eco-expo AICHI 2005 aimed to emphasize humanity and nature in the 21<sup>st</sup> century it aimed to give visitors firsthand experience in cutting edge technology new social system and future life style that can offer solutions to many challenges in the sustainability as a model for expose it encourages new social behavior and system especially recycling the venue was liter free voluntaries were trained to separate trash into nine different category visitors experience some of the most advanced environment at technology these included bio-degradable plastic eating utensils ,a world greening wall for suppressing the heat Island effect which is seen in urban areas fuel cells hybrid bus that linked the perimeter of the site.

The Japanese have always had their masterpiece in environmental solutions in the world expose which are common they not only pollute the environment they also require huge sum of money the world leads to utilize the more like Japanese which is pure showcase.

## **3. Asian Productivity Organization's green productivity initiatives**

It is a multidisciplinary concept which can help its member's countries to enhance eco-competitiveness and combat climate change it includes sixteen countries in Asian-Pacific. It has series of operation. In the 6th series Eco Product International fair (EPIF) 6th EPIF is aneco business platform for entrepreneurs and a green forums .It has a recommendation for strict industrial standards for recycled materials and for

recycled product, effective waste management eco finance project initiatives. APC operation is so far much satisfactory these kind of initiatives will make industry to go green.

#### **4. Astana Green Bridge initiatives**

The goal this initiatives if the development of regional and intersectorial corporations and the creation of the environment for the introduction of green economic principles in Europe Asia and the pacific it includes developed and developing country, science and practice conservation of natural resources intellectual property and general accessibility to them.

#### **5. Vaoding, China's first carbon city**

Vaoding is a city in China which has more than 1 million populations this city is considered to be the first carbon positive city in the world this is possible due to the efforts along with additional national and international supports. Eventhough China is a top pollutor Vaoding has proven that china not only China every nation capacity to build carbon positive.

#### **6. Beijing Olympics 2008: Urban transformation**

This Olympic is not only a great game for players but also for China urban transformation and new infrastructure development in the capital in the capital. Most of the capital invested in infrastructure has helped sharp and faster environment awareness among the public and an opportunity to showcase China's commitment to the growth in an environmentally sustainable manner. The recent Rio Olympic also followed the similar strategy for green economy. This is also followed in FIFA World Cup.

#### **7. Carbon Tax South Africa**

To add Valoram's CO<sub>2</sub> emission tax on the new passenger vehicle by the south African government has not only helped the people to know about CO<sub>2</sub> emission but also made other countries to put such tax towards green economy.

#### **8. Conclusion**

Green economy not a concept to top conventional. Even though there are criticism the renewable energy green building, sustainable transport, water and waste Management, land management all these require green energies and initiatives from all

government few such initiatives were the German renewable energy act and the American recovery and reinvestment act 2009, legislation of many other member state of European union. People government has to work in Synchronized way to make SDG, COP21 agreement to wards success.
